Smith Heating & Cooling

SAMPLE WORKBOOK · MADE-UP COMPANY

4 people
interviewed

9 opportunities
found

15–22 hours
a week back, estimated

SUMMARY

The short version

Smith Heating & Cooling loses most of its time to the phone and to typing the same job details more than once. Four people told us about their week: Mike (owner), Dana (office manager), Luis (dispatch) and Rob (lead technician).

15–22 hrs
a week of repetitive work that can be automated

3 times
each job's details are typed in today

About 1 in 4
calls go to voicemail during busy hours

Start with these three

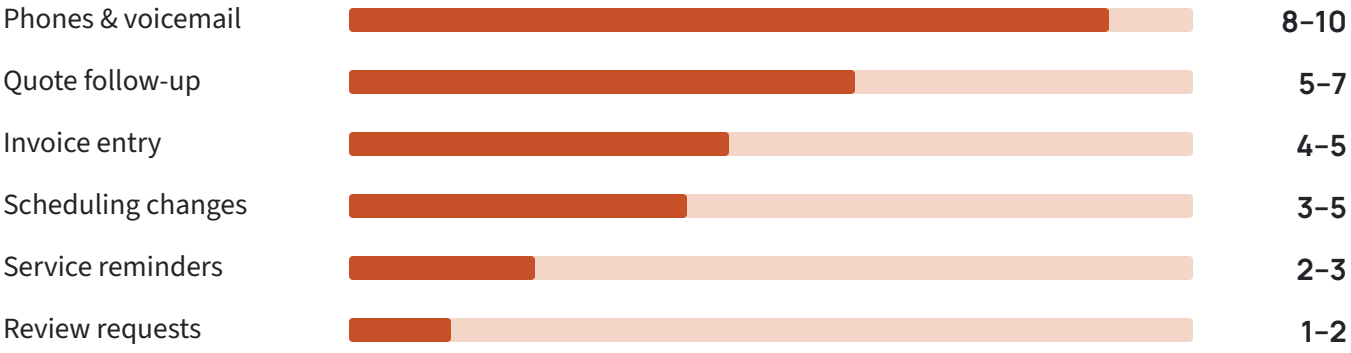

FIX	LEVEL	TIME BACK / WEEK
Text back every missed call Callers get a text within a minute and can book or ask a question.	QUICK WIN	5–7 hrs
Automatic follow-up on open quotes Day 2 and day 5 reminders that stop when the customer replies.	QUICK WIN	4–6 hrs
Enter each job once One entry flows to the schedule and to QuickBooks.	NEXT LEVEL	3–5 hrs

Hours are ranges based on what each person told us about how often a task happens and how long it takes.

WHERE THE TIME GOES

Where your team spends time

Repetitive work across the team, in hours per week.

By person

PERSON	WHAT REPEATS MOST	HRS / WEEK
Dana, office manager	Returning voicemails, chasing quotes, typing invoices into QuickBooks	**9–12**
Luis, dispatch	Re-entering jobs from Dana's notes, calling customers about schedule changes	**4–6**
Mike, owner	Answering calls on job sites, approving quotes at night	**3–5**
Rob, lead tech	Texting photos and notes back to the office after each job	**1–2**

What stood out: a new job is typed in by Dana when the customer calls, again by Luis to put it on the schedule, and again by Dana when it's invoiced. Fixing that one handoff helps three people.

ALL OPPORTUNITIES

Simplest to most involved

#	FIX	LEVEL	TIME BACK	DO IT YOURSELF
1	Text back every missed call	QUICK WIN	5–7 hrs	~$30/mo
2	Ask for a Google review after each job	QUICK WIN	1–2 hrs	Free–$20/mo
3	Automatic follow-up on open quotes	QUICK WIN	4–6 hrs	~$30/mo
4	Seasonal service reminders	QUICK WIN	2–3 hrs	~$20/mo
5	Enter each job once, synced to QuickBooks	NEXT LEVEL	3–5 hrs	~$50/mo
6	Techs send job notes and photos from a form	NEXT LEVEL	1–2 hrs	Free
7	Online booking for tune-ups	NEXT LEVEL	1–2 hrs	~$30/mo
8	AI receptionist for after-hours calls	BIGGER PROJECT	3–4 hrs	~$100/mo
9	Owner dashboard: jobs, quotes, cash	BIGGER PROJECT	1–2 hrs	Varies

Each item has its own page with step-by-step instructions and our set price to build it for you. Totals overlap, so the combined estimate is 15–22 hours a week, not the sum.

OPPORTUNITY 3 · QUICK WIN

Automatic follow-up on open quotes

What happens today	Dana emails quotes from the office. Nobody follows up until she has time, about 9 days on average. Mike said he "loses a couple of jobs a month" to whoever calls back first.
Workload	About 15 open quotes a week × 20–25 minutes of calling and emailing each = 5–7 hours a week.
The fix	When a quote goes out, a friendly text and email go out on day 2 and day 5 asking if they have questions. The moment the customer replies, the reminders stop and Dana gets a note to call.
Time back	About 4–6 hours a week, plus quotes answered days sooner.
Difficulty	Easy. Works with the email and quoting you already use.
Do it yourself	1. Pick a texting tool that connects to your email or quoting software (about $30/mo). 2. Write two short messages. Starter messages are included with your workbook. 3. Set the rule: send on day 2 and day 5, stop on any reply. 4. Test it on your own phone, then turn it on.
Have JPR build it	Set up, tested and running in about a week, at the set price listed in your workbook.

OPPORTUNITY 5 · NEXT LEVEL

Enter each job once

What happens today	Dana writes up the job when the customer calls. Luis re-types it into the schedule. After the job, Dana types it again into QuickBooks to invoice.
Workload	About 40 jobs a week × 3 entries × 2–3 minutes each = 4–6 hours a week, plus mix-ups when the copies don't match.
The fix	One intake form. The job lands on Luis's schedule automatically, and when Rob marks it done, a draft invoice appears in QuickBooks for Dana to check and send.
Time back	About 3–5 hours a week, and fewer billing errors.
Difficulty	Moderate. Connects your scheduling tool to QuickBooks Online.
Do it yourself	1. Check whether your scheduling software has a QuickBooks Online connection (many do). 2. If not, a connector service can link them (about $50/mo). 3. Map the fields: customer, address, job type, parts, labor. 4. Run a week side by side before you stop the old way.
Have JPR build it	Mapped, tested and running in 2–3 weeks, at the set price listed in your workbook.

WHAT TO DO FIRST

Your 90-day plan

Weeks 1–2 — **Text back missed calls. Turn on review requests.**
The two fastest wins. Nothing changes for your team except fewer voicemails.

Weeks 3–4 — **Quote follow-up on autopilot.**
Dana stops chasing quotes by hand. Track how many come back in the first month.

Month 2 — **Enter each job once, synced to QuickBooks.**
The biggest fix for the office. Run it side by side for a week first.

Month 3 — **AI receptionist for after-hours calls.**
Books tune-ups and takes emergency details overnight, so mornings start with a list instead of voicemails.

> **By day 90:** an estimated 15–22 hours a week back across the team, and every caller hears back the same day.

NEXT STEPS

Your plan. Your choice.

This workbook is yours to keep, whatever you decide.

Build it yourself

Every item has step-by-step instructions and the tools it needs.

Use your IT provider

Hand them this workbook. Everything they need is in it.

Have JPR build it

Pick the items you want. Each has a set price, no hourly billing.

Your $497 comes back. Hire us to build something within 60 days and your entire audit fee is credited toward the project.
